

## Intelligent skincare

LPG endermologie, the 100% natural, non-invasive intelligent skincare brand has just launched a series of brand new facial treatments. Using a motorised treatment head to apply a gentle stimulation to the skin, LPG's facials work both on the surface and underneath the skin to reactivate the cell mechanisms that keep the skin looking fresh and radiant. LPG's facials are designed to be long lasting and deliver visible results after the very first treatment.

With no risks, side effects, invasive procedures or injections, LPG endermologie's facials ensure your face stays looking fresh and radiant through all the late nights and early mornings.

### **Detox**

Targeting under eye and acting as concealer in 20-minutes, from £40

Using endermologie's signature cell stimulation, the treatment drains toxins to re-oxygenate the skin. Using the CELLU M6 Alliance's patented head, the treatment offers a completely pain-free stimulating massage to improve microcirculation around the eye area. This results in the eye contour area being smoothed and dark circles and puffiness being reduced by stimulating the production of collagen and elastin to refresh and rejuvenate the eye area.

### **Glow**

Visibly boosting the skin's radiance in just 15-minutes, from £30

Reactivating the fibroblasts deep inside the skin, applying endermologie through the glow facial delicately and naturally exfoliates the skin to stimulate microcirculation and provide a unique sensory stimulation. By enhancing the complexion from within, the treatment achieves a radiant instant glow.

### **Face, Eyes & Lips**

Focusing on these specific areas to replace eyeshadow, from £40

To offer an entirely non-invasive alternative to cosmetic surgery - such as fillers or injectables - endermologie's targeted treatment achieves natural visible results. Using endermologie's stimulation technology, the treatment carefully works on specific areas. In ten minutes, the tool works to achieve plump, full and natural lips, widened eyes and lifted eyelids. Stimulating the skin from within, a refreshed and all-natural glow is achieved by accelerating the production of collagen, hyaluronic acid and elastin. Wrinkles are therefore smoothed, puffiness is reduced and eyebrows are lifted - achieving the same results as hours of invasive cosmetic surgery or a full face of make-up.

LPG endermologie is available at clinics, centres and salons nationwide. Search for your nearest [here](#).
